

TRACK LINE

Safe roads in all conditions

Safe roads for all road users. This is vitally important, though not necessarily a foregone conclusion. A well-maintained, reliable road surface is a pre-requisite; it makes an invaluable contribution to road safety. In that respect, unambiguous and highly-visible road markings are essential. Track Line is a specialist in the application of road markings and road-surface coverings, and re-conditioning road surfaces. In each instance, our starting point is safety.

TRACK LINE: YOUR SPECIALIST IN:

- // the application and removal of road markings
- // the application of road-surface coatings such as Track Line Tyregrip
- // cleaning and roughening the texture of the road surface
- // surveying the standard and service life of road markings
- // carrying out reflectivity measurements

With Track Line you can be sure you are dealing with specialists. You have a single point of contact for all questions relating to road markings, road-surface coatings and road-surface reconditioning.

TRACK LINE STANDS OUT DUE TO:

- // know-how and specialist knowledge
- // a high degree of flexibility
- // an innovative approach

ROAD MARKINGS

HIGH-QUALITY MEANS GREATER SAFETY

MANAGING TRAFFIC

Road markings make a significant contribution to road safety. They help road users to negotiate roads safely. Track Line has the know-how and expertise on hand to apply road markings in nearly all conditions. Day and night. We develop innovative applications and machines in order to make efficient, high-quality markings. Permanently or temporarily. No situation is too problematic for us. We can paint markings on any surface, regardless of the scope, from concrete to clinker setts and from asphalt to coatings. And from motorway to the parking space in the street. Track Line provides road markings that meet the strictest requirements.

THE BENEFITS OF TRACK LINE

Track Line bases its advice on its thorough knowledge and expertise. The advice we give goes further than road markings alone: we help you consider the most suitable lining and marking applications and products. Track Line has an extensive fleet and specialist employees. We work efficiently, taking into account all aspects of the traffic situation. During our work, we ensure that traffic disruption is kept to a minimum. So you can be sure that traffic flow will always be maintained.

UNAMBIGUOUS **ROAD MARKINGS** MEAN A SAFE ENVIRONMENT

ROAD MARKINGS FOR EVERY ENVIRONMENT

The road markings we provide are not limited to the familiar stripes and lines on the road surface. Track Line goes much further. We also place traffic signs, wording and warnings, figures and symbols. Of the highest quality, of course. Track Line also marks lines in industrial estates and car parks. And our expertise counts for something where indoor marking is concerned, too. We provide the best- in logistical routes in multi-storey car parks, factories and industrial facilities. Here too, the markings we apply meet the strictest requirements. So you can guide your visitors safely over your premises or through your building with unerring accuracy. See our website for more information.

INVENTORISATION AND ADVICE DEGREE OF VISIBILITY

The reflectivity and whiteness of road markings deteriorate with time. Reduced road marking visibility makes the roadway less safe. Track Line gives you a clear picture of the status of the markings. Our analysis gives you a good idea of the standard and prospective service life. Using this analysis, Track Line can make you a detailed maintenance plan. This will let you know when road markings need to be replaced. And we will, of course, be happy to advise you on such matters. With our thorough analysis you will be in a position to plan your work and budgets for road maintenance realistically.

TRACK LINE TYREGRIP

THE BEST SOLUTION FOR SAFE CYCLE PATHS

HOW DO YOU MAKE SURE THAT A CYCLE PATH IS SAFE?

Netherlands is a country of cyclists. You can increase the security of this group of vulnerable road users by making sure that the road network is configured appropriately. Cycle lanes and unsegregated cycle tracks are significant methods of achieving this.

TRACK LINE TYREGRIP

Track Line Tyregrip is the best way of improving the standard and, consequently, the safety of unsegregated cycle tracks. It is not just the colour of an unsegregated cycle track that distinguishes it from the main carriageway. Although it must be clearly visible, it is important that it is also rough and skid resistant. A skid-resistant surface improves traction and reduces braking distance. And that is nothing short of a benefit to all road users. Cyclists feel safer in all weather conditions thanks to Track Line Tyregrip.

THE BENEFITS OF TRACK LINE TYREGRIP:

- // Long service life
- // Seamless finish ensures safety
- // Little delay due to the short time taken to lay the surface
- // Endless possibilities

WATER IS THE SOLUTION!

REMOVING ROAD MARKINGS

Sometimes markings have to be removed because of a new road layout, new asphalt being laid or because existing road markings have deteriorated. Removing road markings is part of Track Line's core business. Our method is thorough, precise and less environmentally-costly than other methods. Track Line deploys machines that remove road markings using water power.

The advantage of using water jets to remove road markings are:

- // The existing surface remains intact.
- // Markings are removed with precision.
- // Low-noise method.

A SLIPPERY ROAD SURFACE?

Over a period of time roads become slippery, not least due to wear. The road surface becomes 'polished' due to use and the pollution associated with such use. A slippery road surface can lead to hazardous conditions: road users have to take a longer stopping distance into account. Track Line offers the solution to this. Our technique is to 'cut' into the existing slippery road surface. The result? A rough, skid-resistant road surface.

THE BENEFITS:

- // The surface texture is once more rough, hence safer.
- // The approach is environmentally-friendly.
- // It is an excellent alternative to other roughening techniques.
- // The work is carried out by mobile equipment, thus reducing disruption to traffic.

CLEANING

A road owes its safety primarily to the skid resistance of the surface. That goes for regular roadways, but also runways at airfields. On a wet surface tyre rubber is apt to lose its grip more easily. Track Line cleans the surface efficiently, without damaging it. Our method of cleaning leaves existing markings intact. The process of cleaning the surface includes:

- regular roadways (for motorised or other traffic);
- runways;
- test tracks for car and lorry manufacturers;
- race tracks.

The process of cleaning a road surface may also be necessary if too much bitumen 'floats' to the surface when asphalt is being laid. In rainy conditions this makes the surface of the road more hazardous. Track Line ensures that the road surface is once more rough and safe after cleaning. We also remove cement residue on surfaces laid with asphalt concrete.

CONTACT

Would you like to know what Track Line can do for you? Feel free to contact us. You can reach us on +31 (0)345 523 893. We would be happy to advise you.

Track Line B.V. is specialised in the application of road markings and road surface coatings. For more information, see www.trackline.nl.

Track Line B.V. • Handelstraat 2 • P.O. Box 107 • 4140 AC Leerdam • The Netherlands
T +31 (0)345 523 893 • info@trackline.nl • www.trackline.nl
