

**TRACK LINE** b.v.  
road marking

**WATER**  
IS THE  
SOLUTION!

Safe roads due to professional maintenance

Safe roads for all road users. This is vitally important, though not necessarily a foregone conclusion. A well-maintained, reliable road surface is a pre-requisite; it makes an invaluable contribution to road safety. Track Line returns the road surface to prime condition. We can remove road markings and apply new markings. Track Line can clean the road surface or roughen it efficiently, without unnecessarily burdening the environment. The service life of roads can thus be considerably extended. And, just as importantly, the safety of road users increases as a result.

## REMOVING ROAD MARKINGS

Sometimes markings have to be removed because of a new road layout, new asphalt being laid or because existing road markings have aged. In addition to applying road markings, their removal is part of Track Line's core business. Our method is thorough, precise and less environmentally-costly. Track Line deploys specialist machines that remove road markings using water power. The force of the water 'cuts' markings out with accuracy and precision. So Track Line has a solution for every situation.

The advantages of using water jets to remove road markings:

- ▀ **The existing surface remains intact.**

We have refined our method so that hardly any damage is caused to the road surface.

- ▀ **Markings are removed with precision.**

Track Line removes markings using the so-called 'peel jet' technique at the most efficient angle. This means we can work very precisely, i.e. efficiently.

- ▀ **We use a low-noise method.**

Our approach means less nuisance for the surrounding area. Which residents will appreciate.

**TRACK LINE**  
RETURNS THE ROAD SURFACE  
TO PRIME CONDITION.  
**THE ROAD IS SAFE ONCE MORE.**

### POROUS ASPHALT

Track Line can also clean and roughen roads with a topping of porous asphalt. The water pressure obtained by our machines can be set to clean or roughen even this type of road surface without damaging it. The road surface is once more roughened and we immediately restore the water-storing properties of the porous asphalt. This prevents the possibility of aquaplaning, which it is comforting to know.

## A CLEAN ROAD SURFACE

A road surface can be said to be safe not least due to its roughness. That applies to regular roadways, but also to runways at airfields. Pollution from rubber tyres, in combination with rain, reduces friction and grip. Track Line cleans the surface thoroughly, without damaging it. Our method of cleaning leaves the surface and even existing markings intact. We work efficiently and flexibly and, naturally, take the conditions into account.

The process of cleaning the surface includes:

- // regular roadways (for motorised or other traffic);
- // runways;
- // test tracks for car and lorry manufacturers;
- // race tracks.

The process of cleaning a road surface may also be necessary if too much bitumen 'floats' to the surface when asphalt is being laid. In rainy conditions this makes the road more hazardous. Track Line ensures that the road surface is once more rough and safe after cleaning. We also remove cement residue on surfaces laid with asphalt concrete.

## A SLIPPERY ROAD SURFACE?

Over a period of time roads become slippery, due to wear and other factors. The road surface becomes 'polished' due to use and the pollution associated with such use. A slippery road surface can lead to hazardous conditions: road users have to take a longer stopping distance into account. Track Line offers the solution to this. Our technique is to 'cut' into the existing slippery road surface. The result? A rough, skid-resistant road surface.

The benefits:

- // The surface texture is once more roughened, hence safer.
- // The approach is environmentally-friendly.
- // It is an excellent alternative to other roughening techniques.
- // The work is carried out by mobile equipment, thus reducing disruption to traffic.

# TRACK LINE

Track Line is a specialist in the application and removal of road markings, the application of road-surface coatings, and re-conditioning road surfaces. With Track Line you can be sure you are dealing with specialists. You have a single point of contact for your questions.

Track Line stands out due to:

- // know-how and expertise;
- // a high degree of flexibility;
- // an innovative approach.

Continuity is central to the services we provide. We employ specialist operators and engineers. They ensure that our machines can operate in all circumstances and situations. Due to our extensive knowledge of road surfaces and techniques (such as cleaning), we are able to perform any work you require. You can count on continuity: you can count on Track Line.

## TRACK LINE, YOUR SPECIALIST IN:

- // the application and removal of road markings
- // the application of road-surface coatings such as Track Line Tyregrip
- // cleaning and roughening the texture of the road surface
- // surveying the standard and service life of road markings
- // carrying out reflectivity measurements

## CONTACT

Would you like to know what Track Line can do for you? Feel free to contact us. You can reach us on +31 (0)345 523 893. We would be happy to advise you.

Track Line B.V. is specialised in the application of road markings and road surface coatings. For more information, see [www.trackline.nl](http://www.trackline.nl).

Track Line B.V. • Handelstraat 2 • P.O. Box 107 • 4140 AC Leerdam • The Netherlands  
T +31 (0)345 523 893 • [info@trackline.nl](mailto:info@trackline.nl) • [www.trackline.nl](http://www.trackline.nl)
